Subject: CRW Questions

Hi Victor,

Here are the questions I have come up for now for the CRW July 25 presentation. Please send me your questions.

Questions for CRW's July 23, 2020 presentation

1. Has the CRW H&H Model meet the calibration and validation parameters that meets the standards set in the Water Environmental Federation Manual of Practice FD-17 with its revised LTCP.
2. CRW has been talking about the rehabilitation of the Front Street Interceptor since at least August 2018 with either Cured-in-Place Pipe (CIPP) restoration or segmented non-circular slip lining rehabilitation. When will CRW make its decision and what approach they will take.
3. How can CRW LTCP implementation period of 47 years when it's impossible to predict the future for interest rates, improvements in technology, or any other unknow factors that may impact the POTW; especially, since CRW is relying on Adaptive Management Process, where the facility does not know what approach it will be taking in the future.
